

METHOD AND SYSTEM FOR
COMMUNICATING NAVIGATION INFORMATION

ABSTRACT

A method for communicating navigation information includes receiving destination information from a user. The destination information comprises a desired
5 destination of the user. The method includes determining a first route to the destination and communicating the first route to the user. The method includes monitoring position information of a plurality of vehicles and identifying an area causing traffic delay using the
10 position information of the plurality of vehicles. The method also includes determining a second route to the destination to avoid the area and communicating the second route to the user.
